WEEKLY MORBIDITY REPORT  
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

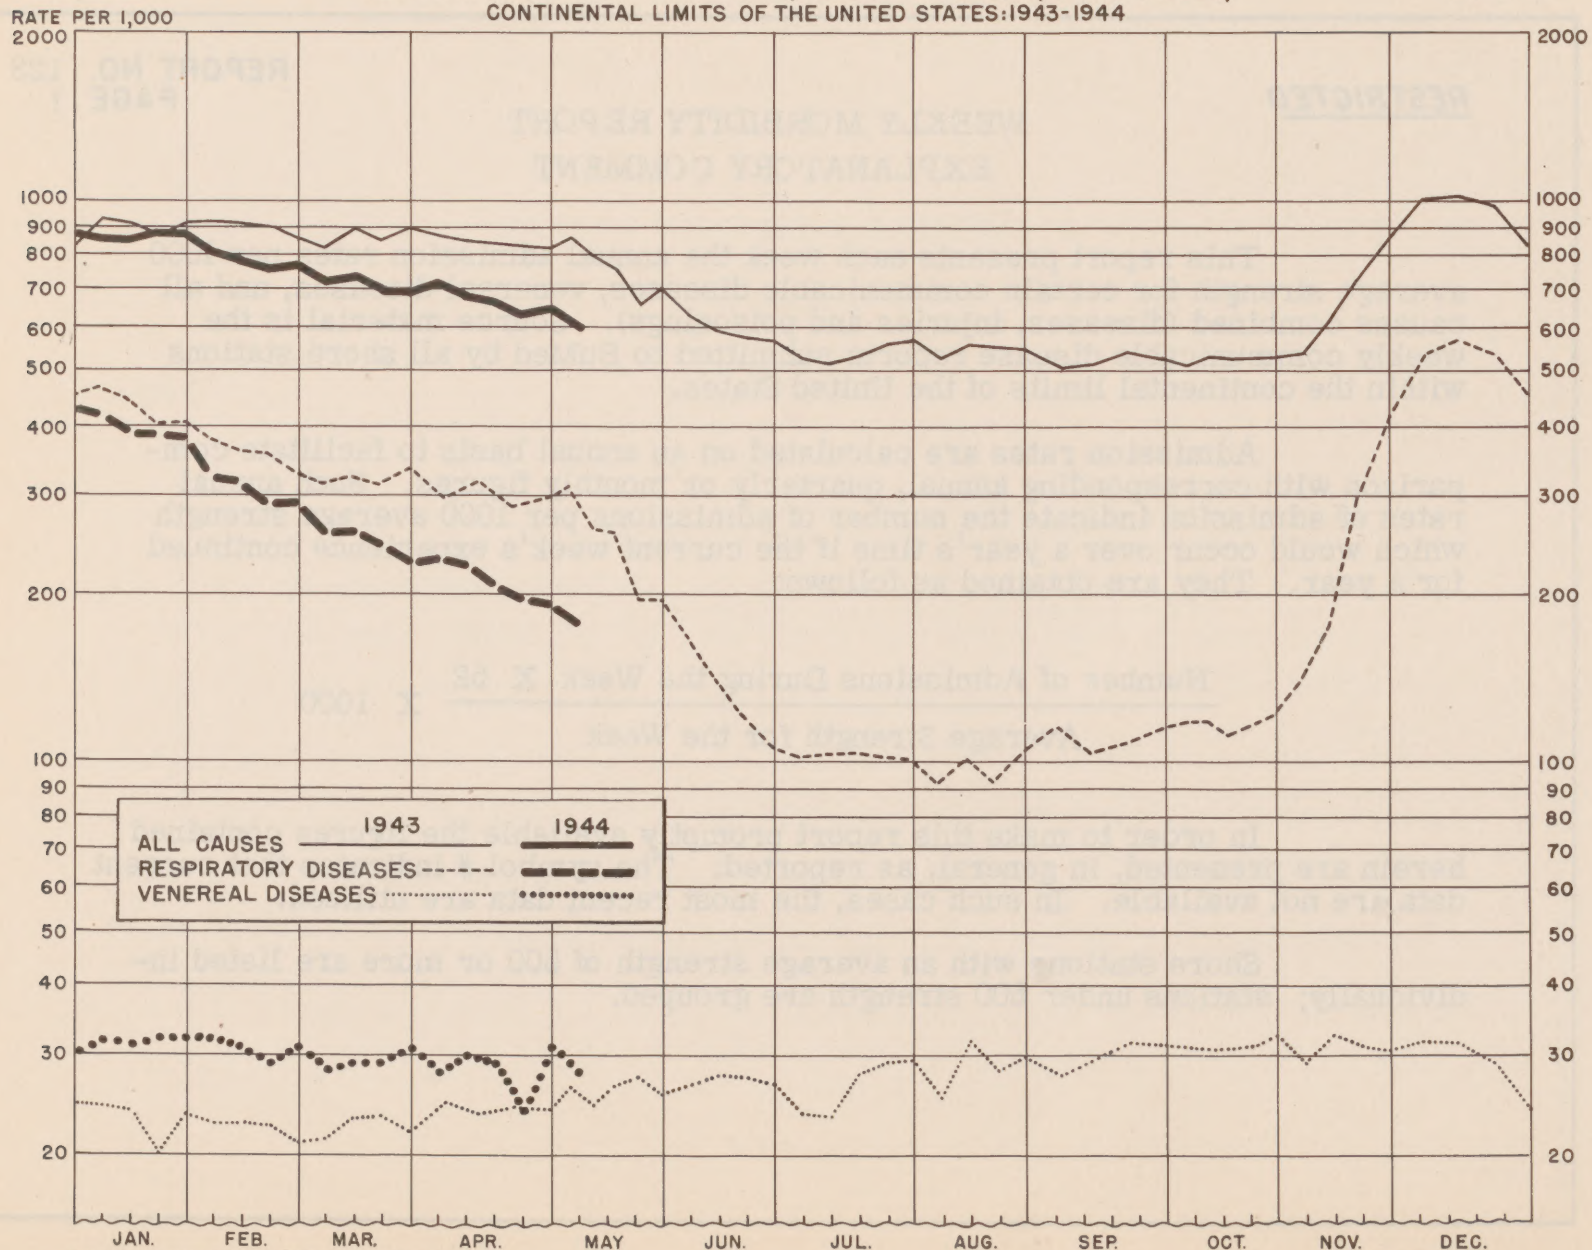

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

RESTRICTED

FIGURE 1  
ANNUAL ADMISSION RATES PER 1,000 AVERAGE STRENGTH, BY WEEKS  
FOR CERTAIN RESPIRATORY DISEASES\*, VENEREAL DISEASES, & ALL CAUSES,  
CONTINENTAL LIMITS OF THE UNITED STATES: 1943-1944

REPORT NO. 123  
PAGE 2

\*INCLUDE: CATARRHAL FEVER, ACUTE; INFLUENZA;  
PNEUMONIA-BRONCHO, LOBAR & ATYPICAL;  
TONSILLITIS, ACUTE (1944 ONLY) PHARYNGITIS, ACUTE (1944 ONLY).

CURRENT TRENDS

Week Ending 6 May 1944

After a slight rise the preceding week the admission rate for All Causes dropped this week. The 1944 curve lies farther below the 1943 curve than has been apparent for any previous week in 1944.

For the fifth consecutive week the respiratory disease rate continued to fall. The rate for this 19th week of the year was only 175 in contrast to a rate over 300 for the corresponding week of 1943. The curve for these infections turned upward in only two Districts, the 3rd and 13th. The highest rate (260) was reported for the 3rd District; the next highest (243) for the 13th; the lowest (77) for the 6th District.

The Venereal Disease rate after a sharp rise to a point over 30 in the previous week dropped back to 28. This rate is only slightly higher than the rate reported for the corresponding week of 1943. The highest rate (39) was reported from the 12th District, the lowest rate (19) from the 6th District.

Influenza and Catarrhal Fever. The curve for these infections continued downward, and is still well below the 1942 and 1943 curves for the corresponding (19th) week of the year. The 3rd District reported the highest rate (203). No other District reported a rate over 154. The lowest rate (51) was reported for the 7th District.

Pneumonia--Broncho and Lobar. Another reduction occurred in the rate for these infections which added to the drop experienced the previous week brought the curve to the lowest point recorded since the fourth week of October 1943. However, the curve still stands somewhat above the curve for the corresponding week of 1942. The highest rate (9) was reported for the 13th District. The Potomac and Severn River Commands reported no cases.

Pneumonia, Atypical. For the ninth consecutive week the rate for this infection was reported at 3. The 1944 curve stands only slightly above the 1943 curve for the corresponding period. The highest rate (12) was again reported from the 11th District. The 4th District reported no cases.

Tonsillitis and Pharyngitis, Acute. The rate for these infections dropped sharply to 52. This is the lowest rate reported since the week ending Jan. 1, 1944. The highest rate (102) was reported from the Potomac and Severn River Commands, the lowest rate (17) from the 6th District.

RESTRICTED

## WEEKLY MORBIDITY REPORT

REPORT NO. 123

PAGE 4

### CURRENT TRENDS--CONTD.

Rheumatic Fever, Acute. The acute rheumatic fever rate continued at the comparatively high level of 3. The highest rate (19) was reported by the 13th District. No other District reported a rate over 3 and the 4th District reported no cases.

Scarlet Fever. The scarlet fever curve dropped again this week and now stands at the lowest point recorded since the first week of Nov. 1944. The 1944 curve stands at a point intermediate between the 1943 and the 1942 curve for the corresponding period. The highest rate (31) was reported by the 13th District, the next highest (11) by the 9th District. The 6th and 7th Districts reported no cases. An increased rate was recorded in the 8th District only.

Cerebrospinal Fever, Meningococcic. The rate for this infection rose to 0.38, a point intermediate between the 1943 rate and the 1942 rate for the corresponding (19th) week of the year. Only one District, the 11th, had a rate as high as 1, and 6 Districts and the Potomac and Severn Commands reported no cases.

Malaria. The malaria curve after a drop the preceding week returned to 3. This rate is higher than the rate reported for the corresponding week of either 1942 or 1943. The highest rate (11) was reported for the Potomac and Severn River Commands. The 4th and 7th Districts reported no cases.

Measles. The measles rate dropped slightly, the curve now standing at a point intermediate between the 1943 and 1942 curves for the corresponding period. The highest rate (23) was reported for the 9th District, the next highest (20) for the 13th District, the lowest (1) for the 6th District.
